SuperTabs-Chlor

Instructions for use:

One effervescent tablet should be allowed to dissolve in 1 liter of drinking water in order to produce a solution containing 1,000 PPM Available Chlorine. Measure the quantity of water accurately in order to maximize the efficiency of the solution.

You can make disinfectant solutions with various Chlorine concentrations by dissolving the tablets in the required quantity of drinking water as indicated in the table below.

Dilution in water	Available Chlorine (PPM)
1 Tablet per 10 Liters	100
1 Tablet per 4 Liters	250
1 Tablet per 2 Liters	500
1 Tablet per 1 Liter*	1,000
2 Tablets per 1 Liter	2,000
10 Tablets per 1 Liter	10,000
